by

OneSolutions
BUSINESS PARTNER

> WE ADD VALUE

**Start your Odoo project
simply with OneSolutions.**

Your Business Is Growing. Are Your Tools Keeping Up?

As your business grows, processes evolve, teams expand and needs become more complex.

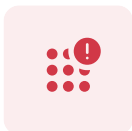

But the tools introduced over time do not always keep pace with this evolution.

A situation you may recognise

- Multiple Excel files
- Different software solutions that barely communicate
- Manual processing
- Numerous email exchanges
- Information spread across several systems

The consequences are real

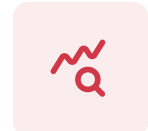

- Scattered information
- Duplicate data entry
- Lack of visibility
- More frequent errors
- Time wasted
- Less efficient teams

Too many
tools

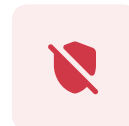

More manual tasks

Growth
held back

Scattered data

Less reliable
decisions

**Your business is evolving.
Your tools must evolve with it.**

Start with what matters most.

Discover the Odoo Starter Pack by OneSolutions

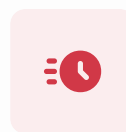

An ERP project does not have to be long, complex or oversized. With the Odoo Starter Pack by OneSolutions, we begin by understanding your priorities in order to define a clear, useful and realistic initial scope. We then select the Odoo applications suited to your business and configure them according to your needs, with the functional and technical support of our experts.

You start simply.
You evolve progressively.
You remain in control of your project.

SIMPLE

The features that are genuinely useful to your business.

FAST

A clearly defined and controlled initial scope.

SCALABLE

New applications added as your needs evolve.

SUPPORTED

OneSolutions experts by your side at every stage.

The goal is not to deploy everything from the outset.
The goal is to start with what creates the most value for your business.

A Project Built Step By Step.

Start with your priorities.

You do not need to transform your entire organisation from day one. With the Starter Pack, we define an initial scope aligned with your priorities, and your Odoo environment can then evolve progressively as new needs arise.

The Starter Pack is not a limited solution.

It is a structured starting point, designed to address your priorities today and support your company's needs tomorrow.

What Is Included In The Odoo Starter Pack by OneSolutions?

From defining your initial scope to going live, our experts support you at every stage to build an environment aligned with your priorities.

Step

What we do

1

Scoping & analysis We work with you to define the key elements of your project.

We take the time to understand your business, objectives and processes in order to identify your key requirements. Together, we define a clear initial scope and select the Odoo applications best suited to your needs.

2

Configuration We build your environment based on the defined scope.

Our experts configure your company, users, access rights and selected applications. The environment is configured according to the approved scope and agreed processes.

3

Preparation & training We prepare your company and teams for launch.

We review and validate the configured environment, prepare the data according to the project's requirements and train your users so they are ready for go-live.

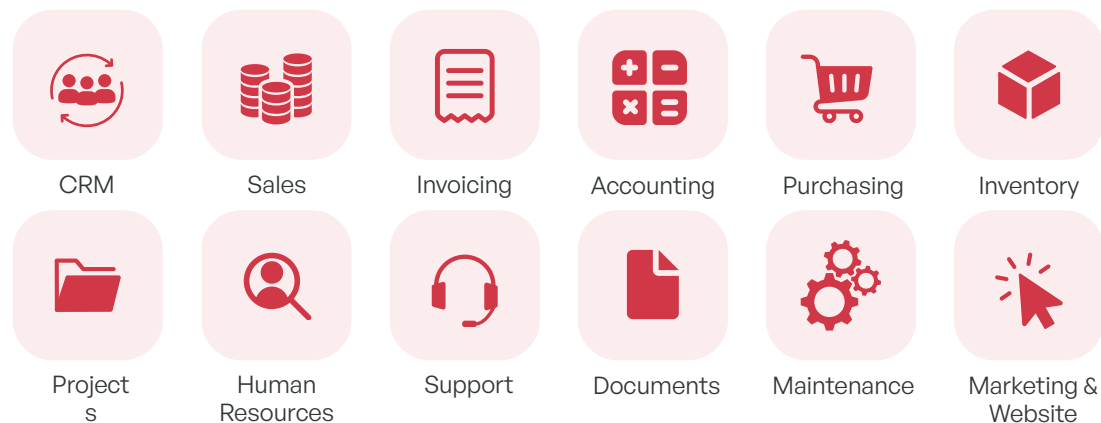

4

Go-live & support We remain by your side after launch.

Your first Odoo environment goes live with the support of our experts. Your Customer Success representative then takes over to monitor your requirements, identify areas for improvement and prepare the next steps.

Applications Tailored to Your Business

With the Starter Pack, we work with you to select the Odoo applications that match the priorities of your initial scope.

What about tomorrow?

Your environment can evolve progressively with new applications as your business needs change.

You start with the essentials. You add more when you need it.

How Does Your Project Work?

From the first conversation to go-live.

A clear and structured method to move forward with you at every stage of your project.

1

Discovery

We discuss your business, objectives and main challenges.

2

Needs analysis

We identify your priority processes and define an appropriate scope.

3

Application selection

Together, we choose the Odoo applications that are genuinely useful to your business.

4

Configuration

Our experts configure your environment according to the approved scope.

5

Training

We prepare your teams to use their new environment effectively.

6

Go-live

Your initial Odoo scope becomes operational.

7

Customer Success

We remain by your side to optimise and evolve your solution.

A Successful Project Is Built Together

The success of an ERP project relies on close collaboration. OneSolutions brings its expertise and methodology, while your teams bring their knowledge of the business and its priorities.

OneSolutions provides

Business & Odoo expertise We advise you to turn your needs into concrete solutions.

Methodology We structure the project around a clearly defined scope and stages.

Support We assist you from defining the scope through to go-live and beyond.

Best practices We guide you towards simple, relevant and sustainable solutions.

Your company provides

Knowledge of your business You share your processes, constraints and priorities.

Key stakeholders You involve the right people to participate in discussions and contribute to the project.

Approvals You validate the elements and make the necessary decisions to move the project forward.

Team involvement Your users take part in the project and prepare to adopt their new environment.

**Your Business.
Our Expertise.
A Project Built Together.**

Success Continues After Go-Live

Once your first Odoo environment is operational, your business continues to evolve.

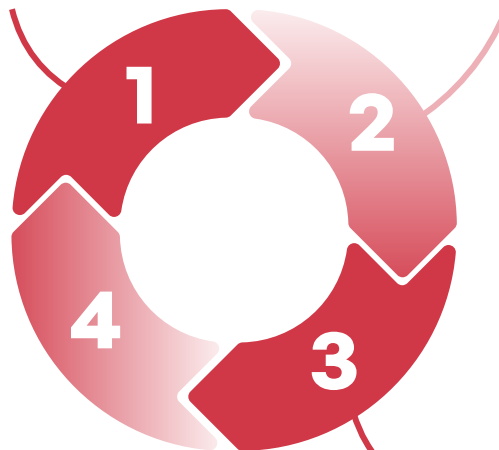

With our Customer Success approach, we remain by your side to support adoption, identify opportunities for improvement and prepare the next steps.

Adoption

We support your teams in using their new environment and identify any points of friction.

Optimisation

Together, we analyse usage and the processes that can still be improved.

Evolution

We prepare the next steps: new applications, new processes and the evolution of your environment.

New needs

As your business evolves, we identify new needs and priorities with you.

CUSTOMER SUCCESS

**A dedicated contact to support the evolution
of your solution.**

Why Choose OneSolutions?

More than an Odoo integrator, OneSolutions has supported companies with their ERP projects and digital transformation for over 10 years.

What Is the Right Starting Point for Your Project?

Every company has different needs. Our role is to help you identify the approach best suited to your priorities, organisation and objectives.

The Starter Pack is right for you if...

You want to get started with a clearly defined scope

You want to centralise tools that are currently scattered

You want to prioritise Odoo's standard features

You want to move forward gradually

You are looking for an initial environment that becomes operational quickly

A customised approach is better suited if...

Your scope covers several processes or entities

You have specific business requirements

You need integrations with other systems

Specific developments are required

Your transformation requires a broader project

In both cases, let's discuss your project.

Starter Pack or customised project, our experts analyse your needs and guide you towards the approach best suited to your company, priorities and objectives.

What Is the Right Starting Point for Your Project?

Do you still have questions?

Here are the answers to the main questions you may have before starting your project.

What budget should I plan for?

The budget depends on the scope, selected applications, number of users and project requirements. After an initial discussion, we define an appropriate scope and estimate with you.

How long does a project take?

The duration depends on the selected scope and the availability of your teams. The Starter Pack is designed to bring an initial operational environment live quickly while keeping the project under control.

Can I migrate my existing data?

Yes. Data migration can be included in the project depending on its nature, volume and quality. Together, we determine the data required for your initial scope.

Can I add new applications later?

Yes. Your environment is designed to evolve. You can start with the essential applications and add more progressively as new needs arise.
